                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid encoding pathogen-related protein PR1-C10. The nucleic acid is used plants for enhanced disease resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 898 BP; 161 A; 295 C; 309 G; 133 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               library of maize. The library was screened using a probe matching to the PR-1 barley clone HVPR1BR. This sequence, AAQ99800-Q99803 and AAQ99805 are all used in recombinant/chimaeric DNA molecules of the invention. These sequences were isolated by differential screening of cDNA library, followed by analysis by Northern hybridisation to RNA in the presence and absence of cyclohexamide. The genes are used in the creation of transgenic plants. All of these sequences confer anti-pathogenic properties to transgenic plants. Transgenic expression of 2 or more of the recombinant molecules of the invention that encode anti-pathogenic proteins provides a synergistic increase in plant protection, and may also offer protection against a wider range of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAZ21186 to AAZ21190 represents the nucleotide sequences for promoters isolated from a family of maize (Zea mays) genes encoding pathogenesis related (PR-1) proteins. The promoters are useful for expressing heterologous genes (Including genes for disease resistance) in plants, especially dicots, or monocots i.e. maize. The promoters are useful for the genetic manipulation of plants to exhibit specific phenotypes, particularly enhanced resistance to pathogen-caused disease. Pathogens include viruses such as tobacco or cucumber mosaic virus, ringspot virus, necrosis virus, and maize dwarf virus, and viroids, bacteria, insects, nematodes and fungi. The present sequence encodes a maize

The promoters are useful for expressing heterologous genes (including genes for disease resistance) in plants, especially dicots, or monocots i.e. maize. The promoters are useful for the genetic manipulation of plants to exhibit specific phenotypes, particularly enhanced resistance to pathogen-caused disease. Pathogens include viruses such as tobacco or cucumber mosaic virus, incrosis virus, and maize dwarf virus, and viroids, bacteria, insects, nematodes and fungi. The present sequence encodes a maize
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CDS

                                                                                                                                                            AAZ21186 to AAZ21190 represents the nucleotide sequences for promoters isolated from a family of maize (Zea mays) genes encoding pathogenesis related (PR-1) proteins. The promoters are useful for expressing heterologous genes (including genes for disease resistance) in plants, especially dicots, or monocots i.e. maize. The promoters are useful for the genetic manipulation of plants to exhibit specific phenotypes,
                                              particularly enhanced resistance to pathogen-caused disease. Pathoge include viruses such as tobacco or cucumber mosaic virus, ringspot virus, necrosis virus, and maize dwarf virus, and viroids, bacteria, insects, nematodes and fungi. The present sequence encodes a maize PR-1 protein given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Crane

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a polypeptide which has antibacterial activity. The antibacterial protein and its polynucleotide can be used for the creation of a plant with resistance against pathogenic microbes
                                                                                                                                                                                                                                                                                        Hybridisation assay; genetic mapping; gene expression protein identification; signal transduction pathway; metabolic pathway; promoter; termination sequence; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                         06-SEP-2000

The specification describes antisense oligonucleotides (AAX52869-X55271) CC directed against at least 2 mRNAs selected from target genes, coding and conon-coding regions of RNAs corresponding to target genes, gene coding non-coding regions of RNAs corresponding to target genes, gene coding intron-exon borders, the comparison of the juxta-section between coding and non-coding cregions and all segments of RNAs encoding proteins associated with one cor more diseases, conditions or mixtures. The antisense oligonucleotides cor more diseases, conditions or mixtures. The antisense oligonucleotides corresponding proteins and conditions or mixtures. The antisense oligonucleotides coligonucleotides (specifically AAX55180-771) can be used for the coligonucleotides (specifically AAX55180-771) can be used for the conditions are those associated with impaired respiration and conditions are those associated with impaired respiration and confirmantion, allergic rhinitis, acute asthma, allergies, asthma, impeded crespiration, respiratory distress syndrome, pain, cystic fibrosis, constructive pulmonary disease (COPD), and cancers such as leukemias, and constructive pulmonary disease (COPD), and cancers such as leukemias, chronic constructive pulmonary disease (COPD), and cancers such as leukemias, chronic constructive pulmonary disease (COPD), and cancers such as leukemias, chronic constructive pulmonary disease (COPD), and cancers such as leukemias, chronic constructive pulmonary disease (COPD), and cancers such as leukemias, chronic constructive pulmonary disease (COPD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 10

The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. golon cancer, breast cancer, lung cancer, pancreatic cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as well as all types of cancers which may metastasize Sequence 114955 BP; 6071 A; 29417 C; metastasized to the lungs, including breast and prostate cancer. 36712 G; 21328 т; Length 114955 21427 other;

```
AAQ73500 shows the Pseudorables virus (PRV) large latency transcript (CLIT). The basic sequence is derived from PRV strain InFh and PRV Strain Ka. The LIT overlaps and is transcribed in the opposite contentation with respect to the EPO (early polypeptide 0) and the CC immediately early gene (IE180). EPO is nonessential for replicatio, CC LLT is the only gene expressed during PRV latency, and the IE180 CC gene is absolutely necessary for PRV replication. However there are CC copies of IE180 in the genome. It is expected that PRV lacking one CC of the IE180 copies is viable. Deletions in the non-overlapping CC regions of these 3 genes will generate single deletion routants. CC while deletions in overlapping regions will generate double deletion comutants. The invention is concerned with the construction of attenuated cornuses which have a reduced ability to reactivate from latency. This CC can be achieved by functionally disabling the expression of the EPO CC gene, or by disrupting the synthesis of the LLT, or both. (See also

                                                                                              This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-cp6-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one CC member, of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two Cc classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of CC of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide CC types and for investigating cell differentiation of cell or tissue CC types and for investigating cell differentiation. The method allows the CC methylation status of many C residues to be determined simultaneously. CC abgl3410-Abg54121 represent genomic DNA sequences used to illustrate the cmethod for determining the degree of cytosine methylation described in the disconsure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4334
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism; SNP; cell differentiation; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-SEP-2000; 2000DE-1043826.
